E*STAR® REUSABLE TEXTILES

ENERGY SAVINGS. ECONOMIC ADVANTAGES. ENVIRONMENTAL AWARENESS.

Our E*Star® textile and apparel products are specifically engineered to reduce energy consumption during the laundering process. These products process more quickly at lower temperatures, resulting in proven energy savings over conventional textiles.

Further savings are realized through our patented Centium Core Technology®, which dramatically increases strength and durability. This lowers both cost-per-use and replacement costs. These energy and cost efficiency advantages are combined with our characteristic attention to comfort and functionality. E*Star® also furthers our commitment to help customers become more sustainable, because using less energy to launder reusable textiles reduces the environmental impact of your operation.

E*STAR® BATH TOWEL

Soft, absorbent, and substantially quicker to dry than conventional cotton and cotton/poly blend terry products. Pre-laundered and ready to use. Sizes: 22" x 44" and 24" x 48"

E*STAR SURGICAL TOWELS

A uniquely absorbent spun synthetic yarn ensures that these towels meet all clinical performance requirements while remaining soft to the touch and low linting. Like all E*Star® products, they dry quickly and hold up well to industrial laundering.

100% polyester.
Hemmed on four sides.
Available in Misty  Jade
